EIS002286

MR. SULLIVAN: My name is Graham Sullivan, for the reporter.

1 Um, I just have a few points that I'd like to see in the Final EIS, and also I would like to support the Native call for the continuance of the deadline until late April, early May, so that they can get together and discuss this monumental catastrophic event that will happen if it passes.

2 I'd like to see in the final EIS the DOE addressing all the monies saved, gained, and lost by the nuclear
3... industry opening Yucca Mountain. I'd like to also know under what laws do we, as a people, have decision-making ability that will affect all life from now until at least 300,000 years.

What will keep people from dying if the planet is contaminated? How can the DOE purposely affect all life without accepting responsibility for their actions?

Um, I'd like to invite everybody here, including all of the DOE officials to come out to the test site on Mother's Day to join us, you know, and really learn about what's going on, learn how to deal with the problems of transportation, because we are going to shut it down. You think you are going to be able to move the stuff off of the site?

We are going to come and stop you; it's just a reality. You are going to have to live with it. I am sorry.

4 The DOE has not solved the waste problem permanently. Therefore, they should use their money making industry that, you know, is involved in it. They are all getting paid to decide whether or not Yucca Mountain is going to go forth or not. They have decided, even if it does go forth, there is still going to be waste out there. What are we going to do with all the other waste? They say the site is for 70,000 metric tons. They have already said there's going to be over a hundred some odd metric tons. That's if the reactors continue for ten more years. What's going to stop them from making more reactors, and what's going to stop all the medical waste and all the waste attributed to weapons production?

3 cont. And I also would like to know how anyone over 30 can make a deal that won't be done until they are retired. You know, all the people involved in this process from the politicians down to the actual people doing the physical labor on building Yucca Mountain are all going to be retired or dead before this even is finished. So I would like to know how they even begin to believe that they have a right to make decisions that's going to affect my life and all life on this planet from time immemorial.

5 So I would just like these points addressed. You can do it in writing, if you want. You can contact me at Shundahai Network. Thanks. And I think that there should definitely be more DEIS hearings until, at least -- until Yucca Mountain is closed even. Or not DEIS, but EIS. I think we need to continue the discussions of why we are doing this to the planet and what we do, if we do realize we made a mistake. Thank you.

FACILITATOR LAWSON: The last person I have on my list is Ervin Lent, who is a continuation of earlier remarks.
